Modelling using UML

Exercise 5 --------15 Marks

Student Name	Bianca Ngobeni
Student Number	NGBBIA002
Marks	/15

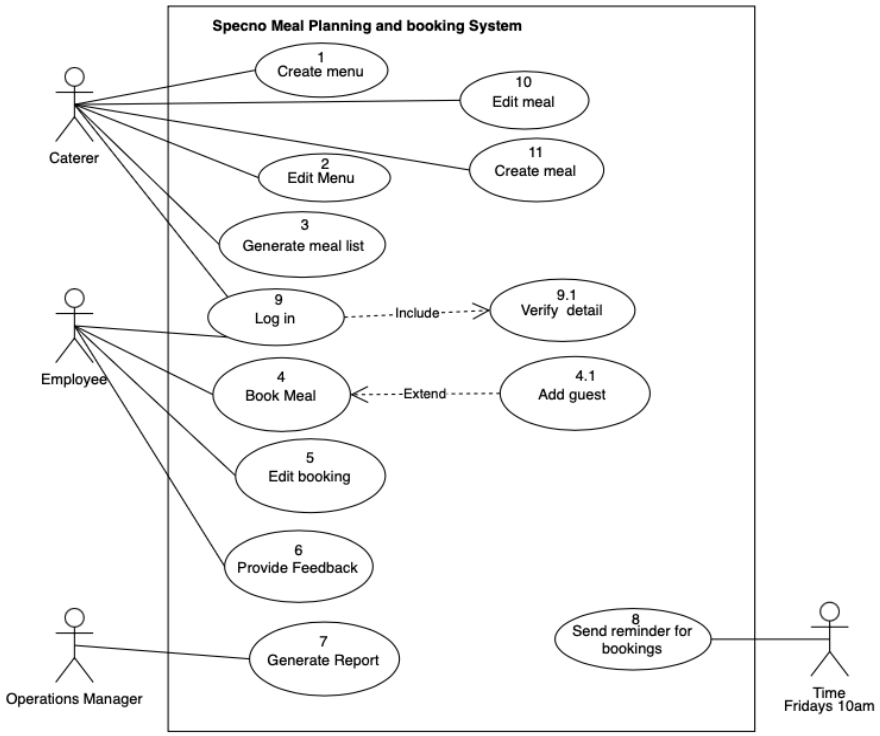

IMPORTANT NOTE:

- Copied or Plagiarised answers will get 0 and student will be referred to Ayanda Pekane for further actions
- Please upload your completed exercise on Amathuba

Question 1 – Use Case Narratives **(15 marks)**

The **use case diagram** for the **meal management system** is presented in the diagram below. It includes all the use cases that will be necessary to automate the meal management process for Specno. The primary and secondary actors are indicated, their associations with the use cases, as well as secondary use cases where dependencies between use cases exist.

Develop a use case narrative for **use case 1** that will describe the process of a creating a menu and for **use case 4** that will describe the process of booking a meal. Please use the template provided below as a guideline and re-draw it in your answer book.

Use Case 1 (7 marks)

Use case:	Create Menu	**ID: 1.1**	**Level: High**
Actors:	Caterer		
Stakeholders and interests	• Management(Uses reports for decision-making and for preparing the budget) • Operations Manager(Oversees operational efficiency, benefits from reduced manual coordination, improved reporting, and decreased human error).		
Brief Description:	The caterer logs onto the system and the system verifies the caterer. Caterer creates a menu and meals. The caterer edits meals, and then creates a meal list and the system uploads the menu and meal list to the calendar.		
Preconditions:	The must workers/employees to create meals for.		
Post conditions:	• Menu must be uploaded to the system. • Menu list must be created.		
Related Use Cases	• Verify details. • Book meal.		

Typical Course of Events

Employee Action	**System Response**
1. Logs into the system	2. Grants caterer access to the system
3. Creates menu	4. Uploads the menu to the calendar
5. Edit menu	6. Updates menu
7. Create meals	8. Generate a meal list

Exception / Alternative Course of Events

Employee Action	**System Response**
7(a). Creates a meal that no employee requested.	7(b) System lets the caterer know that no one requested the added meal.

Use Case 4 (8 marks)

Use case:	Book Meal	**ID: 1.4**	**Level: Medium**
Actors:	Employee		
Stakeholders and interests	• Management(Uses reports for decision-making and for preparing the budget)		

	• Operations Manager(Oversees operational efficiency, benefits from reduced manual coordination, improved reporting, and decreased human error).
Brief Description:	Employee logs onto system and the system verifies the employee's details. The employee books a meal and/or edits the meal. The caterer updates the meal list and prepares the meal. The employee receives the meal when they get to work.
Preconditions:	The must be a menu for the employee to be able to book a meal
Post conditions:	• Meal booking must be recorded • Meal list must be updated • Booking notification must be sent.
Related Use Cases	• Create Menu • Verify details

Typical Course of Events	
Employee Action	**System Response**
1. Logs onto the system	2. Verifies details.
3. Books a meal	4. Sends a list of meals to select from
5. Selects a meal	6. Record meal bookings and updates caterer's meal list.
	7. Sends booking reminder

Exception / Alternative Course of Events	
Employee Action	**System Response**
1(a) Enters the wrong login details	2(a) The system asks the user to provide the correct details
2(a) Books 2 meals	3(a) The system redirects the user to the guest booking
3(a) Books a meal after cut off time	5(a) System displays an error message
