INF2009F
Modelling using UML

Exercise 7 -------- 10 Marks

Student Name	Bianca Ngobeni
Student Number	NGBBIA002
Marks	**/10**

IMPORTANT NOTE:

- Copied or Plagiarised answers will get 0 and student will be referred to Ayanda Pekane for further actions
- Please upload your completed exercise on Amathuba

Question 1 – system sequence diagram (10 marks)

Draw a **system sequence diagram** showing the interaction (message passing) between the employee and the system from the point of selecting the preferred day for **booking a meal** to the point of confirming the preferred meal. Assume that the employee has already logged in on the system and note that employees have an option of booking a meal for the days that they would be present in the office. Messages can be documented at a high level (no need for message parameters, but you should model activities performed by the system using reflective message notation
